

Flex

Documentación y ejemplos de los estilos `flex` con los que cuenta la librería. puedes usar `class` o `data-attributes` .

Display

Para definir el tipo de **display**, puedes usar `class` o `data-attributes` .

class	data-attributes
<code>.eit-flex</code>	<code>data-eit-display="flex"</code>
<code>.eit-inline-flex</code>	<code>data-eit-display="inline-flex"</code>
<code>.eit-block</code>	<code>data-eit-display="block"</code>
<code>.eit-inline</code>	<code>data-eit-display="inline"</code>
<code>.eit-inline-block</code>	<code>data-eit-display="inline-block"</code>
<code>.eit-none</code>	<code>data-eit-display="none"</code>

Responsive

Breakpoint → `md: ≥768px` , `lg: ≥992px` , `xl: ≥1200px` , `xxl: ≥1400px`

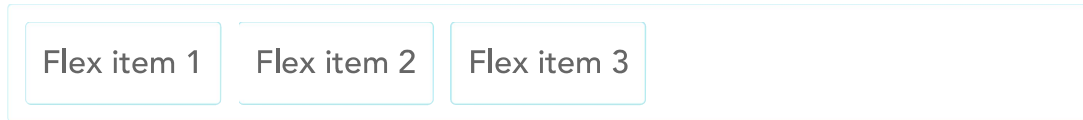

class	data-attributes
<code>.eit-{breakpoint}-{value}</code>	<code>data-eit-display-{breakpoint}="{value}"</code>

Direction

Para definir el atributo **direction**, puedes usar `class` o `data-attributes` .

class	data-attributes
<code>.eit-flex-row</code>	<code>data-eit-flex-direction="row"</code>
<code>.eit-flex-column</code>	<code>data-eit-flex-direction="column"</code>

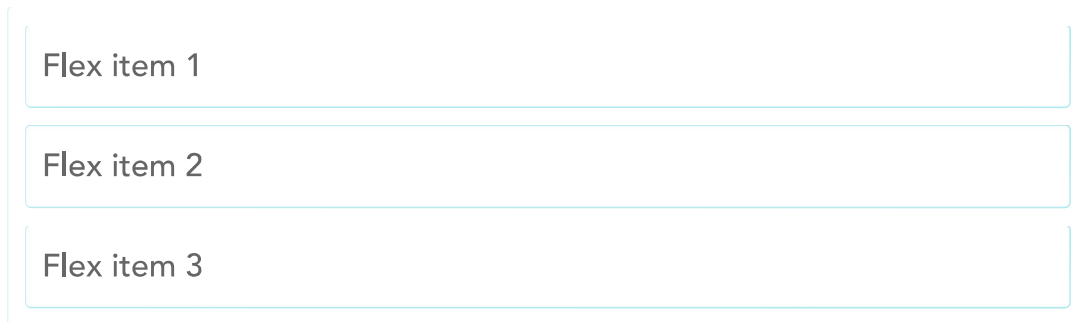

Row

```
<div
  data-eit-display="flex"
  data-eit-flex-direction="row"
>
  <div>Flex item 1</div>
  <div>Flex item 2</div>
  <div>Flex item 3</div>
</div>
```

html

Column

```
<div
  data-eit-display="flex"
  data-eit-flex-direction="column"
>
  <div>Flex item 1</div>
  <div>Flex item 2</div>
  <div>Flex item 3</div>
</div>
```

html

Responsive

Breakpoint → md: ≥768px , lg: ≥992px , xl: ≥1200px , xxl: ≥1400px

class	data-attributes
<code>.eit-{breakpoint}-flex-{value}</code>	<code>data-eit-flex-direction-{breakpoint}="{value}"</code>

Justify content

Para definir el attributo **justify-content**, puedes usar `class` o `data-attributes` .

class	data-attributes
<code>.eit-justify-content-start</code>	<code>data-eit-justify="start"</code>
<code>.eit-justify-content-end</code>	<code>data-eit-justify="end"</code>
<code>.eit-justify-content-center</code>	<code>data-eit-justify="center"</code>
<code>.eit-justify-content-between</code>	<code>data-eit-justify="between"</code>

JustifyStart

JustifyEnd

JustifyCenter

JustifyBetween

html

```
<div
  data-eit-display="flex"
  data-eit-flex-direction="row"
  data-eit-justify="center"
>
  <div>Justify</div>
  <div>Center</div>
</div>
```

Responsive

Breakpoint → md: ≥768px , lg: ≥992px , xl: ≥1200px , xxl: ≥1400px

class	data-attributes
<code>.eit-{breakpoint}-justify-content-{value}</code>	<code>data-eit-justify-{breakpoint}="{value}"</code>

Align items

Para definir el atributo `align-items`, puedes usar `class` o `data-attributes` .

class	data-attributes
<code>.eit-align-items-start</code>	<code>data-eit-align="start"</code>
<code>.eit-align-items-end</code>	<code>data-eit-align="end"</code>
<code>.eit-align-items-center</code>	<code>data-eit-align="center"</code>
<code>.eit-align-items-between</code>	<code>data-eit-align="between"</code>

AlignStart

AlignEnd

AlignCenter

AlignBaseline

Align

Stretch

html

```
<div
  data-eit-display="flex"
  data-eit-flex-direction="row"
  data-eit-align="center"
>
  <div>Align</div>
  <div>Center</div>
</div>
```

Responsive

Breakpoint → md: ≥768px , lg: ≥992px , xl: ≥1200px , xxl: ≥1400px

class	data-attributes
.eit-{breakpoint}-align-items-{value}	data-eit-align-{breakpoint}="{value}"

Fill

Para definir el estilo fill, puedes usar `class` o `data-attributes` .

class	data-attributes
.eit-flex-fill	data-eit-flex="fill"

Flex fill

Flex item

html

```
<div
  data-eit-display="flex"
  data-eit-flex-direction="row"
>
  <div data-eit-flex="fill">Flex fill</div>
```

```
<div>Flex item</div>
</div>
```

Responsive

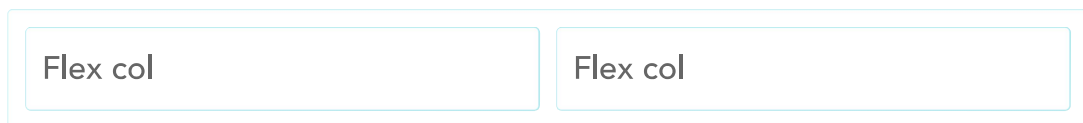

Breakpoint → md: ≥768px , lg: ≥992px , xl: ≥1200px , xxl: ≥1400px

class	data-attributes
<code>.eit-{breakpoint}-fill</code>	<code>data-eit-flex-{breakpoint}="fill"</code>

Col

Para definir el estilo **col**, puedes usar `class` o `data-attributes` .

class	data-attributes
<code>.eit-flex-col</code>	<code>data-eit-flex="col"</code>

html

```
<div
  data-eit-display="flex"
  data-eit-flex-direction="row"
>
  <div data-eit-flex="col">Flex col</div>
  <div data-eit-flex="col">Flex col</div>
</div>
```

Responsive

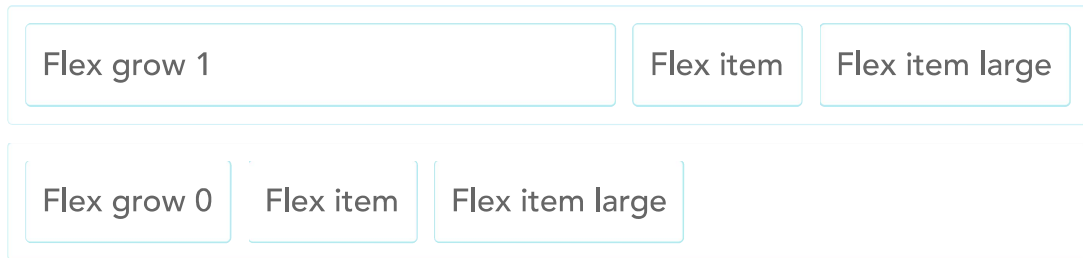

Breakpoint → md: ≥768px , lg: ≥992px , xl: ≥1200px , xxl: ≥1400px

class	data-attributes
<code>.eit-{breakpoint}-col</code>	<code>data-eit-flex-{breakpoint}="col"</code>

Grow

Para definir el atributo **grow**, puedes usar `class` o `data-attributes`.

class	data-attributes
<code>.eit-flex-grow-0</code>	<code>data-eit-flex-grow="0"</code>
<code>.eit-flex-grow-1</code>	<code>data-eit-flex-grow="1"</code>

html

```
<div
  data-eit-display="flex"
  data-eit-flex-direction="row"
>
  <div data-eit-flex-grow="1">Flex grow 1</div>
  <div>Flex item</div>
  <div>Flex item large</div>
</div>
```

Responsive

Breakpoint → md: ≥768px , lg: ≥992px , xl: ≥1200px , xxl: ≥1400px

class	data-attributes
<code>.eit-{breakpoint}-flex-grow-{value}</code>	<code>data-eit-flex-grow-{breakpoint}="{value}"</code>

Shrink

Para definir el atributo **shrink**, puedes usar `class` o `data-attributes`.

class	data-attributes
<code>.eit-flex-shrink-0</code>	<code>data-eit-flex-shrink="0"</code>
<code>.eit-flex-shrink-1</code>	<code>data-eit-flex-shrink="1"</code>

Flex shrink 1	Flex item
---------------	-----------

Flex shrink 0	Flex item
---------------	-----------

Responsive

Breakpoint → md: ≥768px , lg: ≥992px , xl: ≥1200px , xxl: ≥1400px

class	data-attributes
<code>.eit-{breakpoint}-flex-shrink-{value}</code>	<code>data-eit-flex-shrink-{breakpoint}="{value}"</code>

Wrap

Para definir el atributo **wrap**, puedes usar `class` o `data-attributes` .

class	data-attributes
<code>.eit-flex-wrap</code>	<code>data-eit-flex-wrap="wrap"</code>
<code>.eit-flex-nowrap</code>	<code>data-eit-flex-wrap="nowrap"</code>

Flex wrap 1	Flex wrap 2	Flex wrap 3	Flex wrap 4
Flex wrap 5	Flex wrap 6	Flex wrap 7	

html

```
<div
  data-eit-display="flex"
  data-eit-flex-direction="row"
  data-eit-flex-wrap='wrap'
```

```
>
...
</div>
```

html

```
<div
  data-eit-display="flex"
  data-eit-flex-direction="row"
  data-eit-flex-wrap='nowrap'
>
  ...
</div>
```

Responsive

Breakpoint → md: ≥768px , lg: ≥992px , xl: ≥1200px , xxl: ≥1400px

class	data-attributes
.eit-{breakpoint}-flex-{value}	data-eit-flex-wrap-{breakpoint}="{value}"
